

SMALL APERTURE INTEGRATION WITH LIGHTING FIXTURES

James Loudspeaker Small Aperture Series speakers and subwoofers are skillfully designed for architectural installation. Many times, architectural elements of a room compete for space and can be difficult to coordinate to ensure proper room design. James Loudspeaker Small Aperture is uniquely positioned to provide astonishing fidelity and output from a 3" or 4" opening. Additionally, James Loudspeaker offers trim solutions that incorporate light fittings, delivering perfectly aligned lighting and speakers that match in shape and trim. This integration of light fixture and speaker results in a polished, custom aesthetic and hardware that occupies less space within the architectural surface.
